OverSite™ IntelliSign

More About IntelliSign

Features:

- Centralised Control
- Automated Scheduling
- Real-Time Monitoring
- 10-Minute Activation
- Downloadable Radar Data*

Powerful, Intelligent Sign Management Anywhere, Anytime

Take Control of Your Electronic Road Signs with Confidence

Managing roadside signage shouldn't be complicated. With OverSite™ IntelliSign, transportation authorities, councils, and administrators are empowered to seamlessly control and monitor electronic road signs from one centralised, cloud-based platform. Designed with both simplicity and sophistication in mind, IntelliSign enables you to automate schedules, track sign performance, and make informed decisions that enhance road safety and operational efficiency.

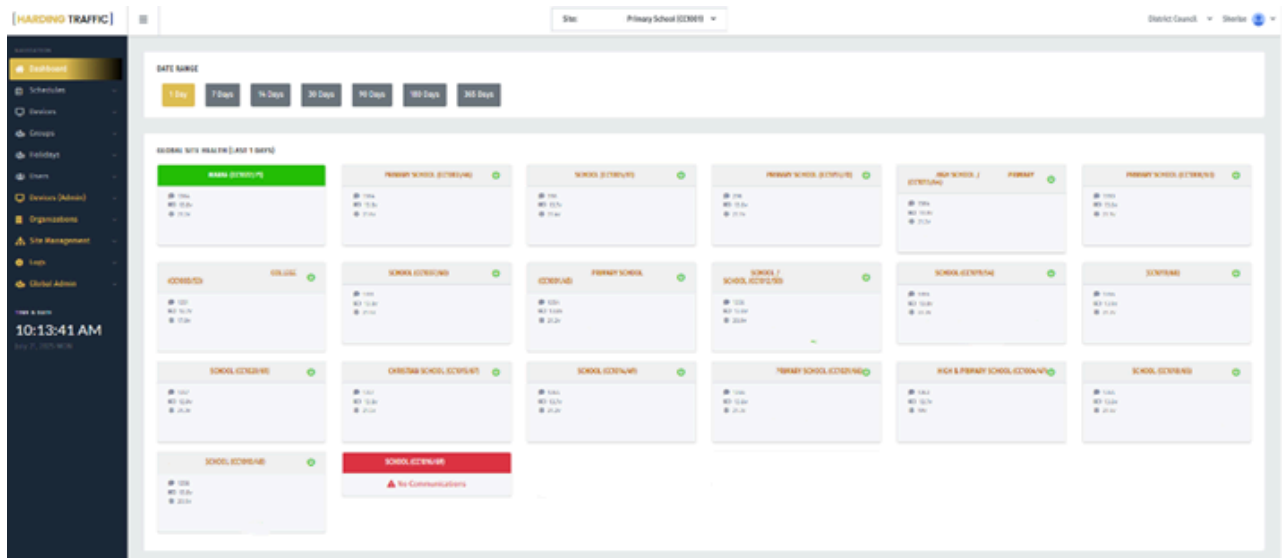

Whether you're managing a single school zone or an entire network of safety signs, IntelliSign delivers the reliability, visibility, and control you need – right at your fingertips.

Each IntelliSign system comes with a 5-year licence and data connection included, meaning there are no ongoing subscription or connectivity fees to worry about for the first five years. At the end of this period, a 5-year extension can be purchased to continue uninterrupted access to IntelliSign

Key Features That Set IntelliSign Apart

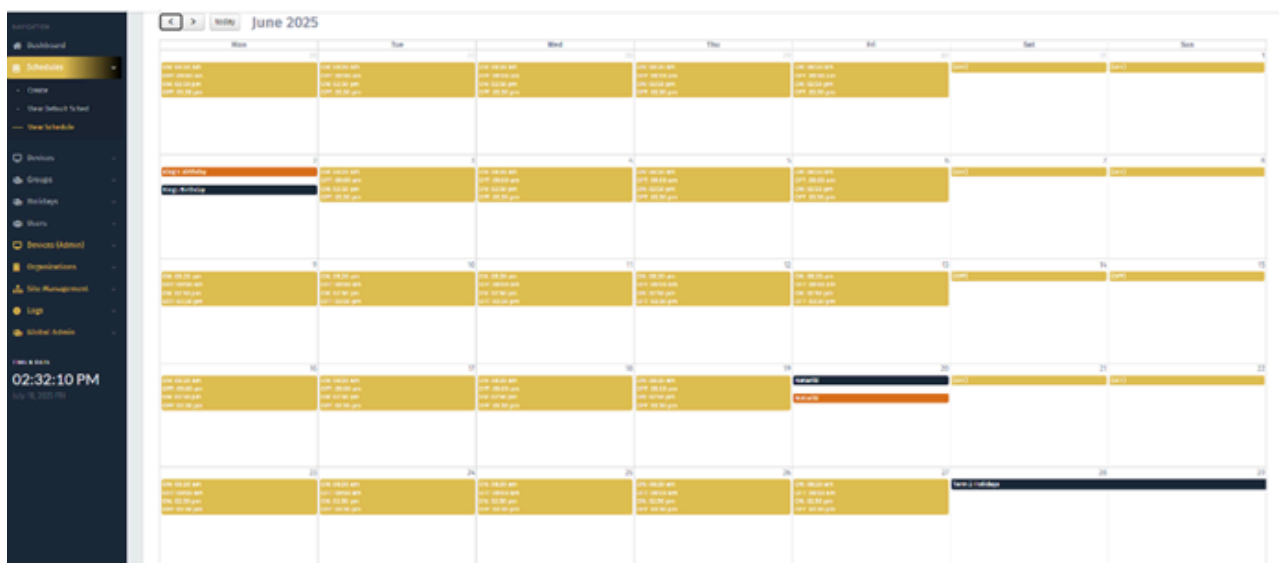

Centralised Control Across Multiple Sites

IntelliSign gives you complete visibility and control over your entire sign network from one central dashboard. Manage dozens, or even hundreds, of connected signs across multiple locations with consistent messaging, synchronised operation, and instant status updates. Say goodbye to manual adjustments and guesswork. Enjoy seamless, centralised control that saves time and ensures every sign performs exactly as intended.

Effortless Automated Scheduling

Simplify day-to-day operations with IntelliSign's fully customisable scheduling tools. Set recurring on/off times for each day, apply tailored holiday schedules for public or teacher-only days, or create quick one-off overrides for special events. The intuitive interface lets you preview, adjust, and fine-tune schedules with ease, ensuring your signs are active only when needed, reducing energy use and maximising efficiency.

Key Features That Set IntelliSign Apart

Live Monitoring and Intelligent Insights

Stay informed with real-time performance data across your entire network. IntelliSign continuously reports on battery voltage, solar charging, communication status, and sign activity. Receive alerts for key events, such as door openings or power fluctuations and review detailed voltage histories and uptime logs. With signs checking in every 15 minutes, you'll always have the latest operational insights at your fingertips.

Key Features That Set IntelliSign Apart

Radar Reporting and Data Export

For radar-equipped signs, IntelliSign captures valuable speed and traffic volume information. Users can easily select a date range and export results to CSV for analysis, helping identify speed trends, understand driver behaviour, and support planning or enforcement decisions with real-world data.

10-Minute Quick Activation

Need to activate a sign on the spot? IntelliSign's Quick Activation feature lets you turn any sign on instantly for a 10-minute period, no scheduling required. Perfect for temporary or unscheduled situations, it gives you immediate control with a single click.

Secure and Scalable User Management

Security and accountability are built into every level of IntelliSign. Administrators can create unique logins for each user and assign permissions based on their role—whether it's view-only access for monitoring or full control for system administrators. All data and access points are protected using modern encryption and authentication protocols to safeguard your network from unauthorised access. The system's scalable design means user profiles and permissions can easily expand as your network grows, maintaining full control as your operations evolve.

About

Intelligent Traffic Management Systems

At Harding Traffic, we are more than just a company; we are pioneers in traffic control solutions with a rich history dating back to 1966 when Harding Signals was incorporated. This marked our venture into electronic traffic signals.

In 1997, our area of operations moved away from Traffic Signals and into Electronic Signage and Traffic Management Systems. To reflect this, we changed our name to Harding Electronic Signals Ltd. Harding Traffic's integration into the Traffitech Group in 2007 marked a new era of growth, joining a group of companies boasting a robust financial standing with \$45 million in revenue, assets exceeding \$20 million, and a dedicated team of 180 staff and 6 locations across New Zealand.

Our journey has been marked by a steadfast dedication to innovation and quality, leading the charge in traffic control technology. With 1000's of the country's traffic signs installed by Harding Traffic over 28 years, our impact is undeniable. Yet our ambition extends beyond electronic traffic signs; we've become a comprehensive provider of traffic management/warning systems, car park solutions, integrated traffic management solutions, data capture and analytics along with so much more. We are committed to enhancing urban infrastructure with our cutting-edge solutions

Quality Guaranteed

Harding Traffic holds AS/NZS 4801 Health and Safety Management certification, ISO 9001 manufacturing quality certification and ISO 14001 Environmental Management System certification. These certifications represent Harding's commitment to providing a consistently high level of service, delivery quality products based on sound management and process controls.
