OverSite™ IntelliSign

More About IntelliSign

Features:

- Centralised dashboard for all assigned sites
- Colour-coded sign status and alarm visibility
- Battery, solar and communication monitoring
- Automated school-term and holiday scheduling
- School User 10-minute activation
- Technical User ON/OFF testing
- Sign running, alarm and radar reporting
- Downloadable data for further analysis
- Role-based user access
- Harding-managed email alerts

Powerful, Intelligent Sign Management Anywhere, Anytime

Take Control of Your Electronic Road Signs with Confidence

OverSite™ IntelliSign is Harding Traffic's cloud-based platform for managing, monitoring and supporting electronic variable speed limit signs, active warning signs, regulatory signs and other connected sign controllers.

Designed for councils, schools, transport authorities and maintenance teams, IntelliSign gives users clear visibility of their sign network from one central dashboard. Users can quickly see whether signs are operating normally, running to schedule, showing an active alarm, or not communicating. The platform helps simplify day-to-day sign management by combining scheduling, reporting, monitoring and controlled user access in one place. Standard operating schedules, school-term dates, holiday periods and teacher-only days can be managed through the portal, helping ensure signs operate only when required.

IntelliSign also provides practical maintenance insight, including battery and solar performance, alarm history, communication status, sign running records and radar data where available. This allows potential issues to be identified earlier, reducing unnecessary site visits and improving confidence in sign operation.

With role-based access, School User 10-minute activation, ServiceUser sign testing and Harding-managed email alerts, IntelliSign provides a smarter, more reliable way to manage electronic signage assets.

Key Features That Set IntelliSign Apart

Centralised Control Across Multiple Sites

IntelliSign gives you complete visibility of your connected sign network from one central dashboard. Monitor multiple schools, sites and signs with colour-coded status updates, alarm visibility and synchronised operation – reducing manual checks, saving time and giving you confidence that every sign is operating as intended.

Dashboard showing multiple sign tiles and their current status.

Effortless Automated Scheduling

Simplify day-to-day sign operation with IntelliSign's flexible scheduling tools. Set the days and times each sign should operate, manage recurring schedules, and apply holiday or blackout periods when signs are not required, ensuring every connected sign runs only when needed.

For school-zone applications, IntelliSign can also manage standard school-term operating times, school holidays, teacher-only days and public holidays through the portal, reducing manual intervention and improving confidence that signs are operating to the correct timetable.

All Holiday View showing all the current, past and upcoming holidays.

Key Features That Set IntelliSign Apart

Monitoring and Intelligent Insights

Stay informed with regular performance data across your sign network. IntelliSign reports on battery voltage, solar charging, communication status, sign activity and alarm events. With signs checking in at regular intervals, users can review battery and solar trends, confirm scheduled operation, identify stale communications and respond earlier to developing issues.

Key Features That Set IntelliSign Apart

Radar Reporting and Data Export

For radar-equipped signs, IntelliSign captures valuable speed and traffic volume information. Users can easily select a date range and export results to CSV for analysis, helping identify speed trends, understand driver behaviour, and support planning or enforcement decisions with real-world data.

Radar report showing recorded data over the selected period.

Controlled Sign Activation & Service Testing

IntelliSign provides controlled activation and testing tools for authorised users, helping signs be checked or operated when required without permanently changing the normal schedule. School Users can activate all signs linked to their selected site for a temporary 10-minute period, ideal for short, unscheduled situations where additional warning is needed. For commissioning, maintenance and fault diagnosis, Service Agents can select individual signs, switch them on or off, and run pixel testing where supported to help confirm display performance and identify potential faults early.

Secure and Scalable User Management

Security and accountability are built into every level of IntelliSign. Administrators can create unique logins for each user and assign permissions based on their role, whether it's view-only access for monitoring or full control for system administrators. All data and access points are protected using modern encryption and authentication protocols to safeguard your network from unauthorised access. The system's scalable design means user profiles and permissions can easily expand as your network grows, maintaining full control as your operations evolve.

About

Intelligent Traffic Management Systems

At Harding Traffic, we are more than just a company; we are pioneers in traffic control solutions with a rich history dating back to 1966 when Harding Signals was incorporated. This marked our venture into electronic traffic signals.

In 1997, our area of operations moved away from Traffic Signals and into Electronic Signage and Traffic Management Systems. To reflect this, we changed our name to Harding Electronic Signals Ltd. Harding Traffic's integration into the Traffitech Group in 2007 marked a new era of growth, joining a group of companies boasting a robust financial standing with \$45 million in revenue, assets exceeding \$20 million, and a dedicated team of 180 staff and 6 locations across New Zealand.

Our journey has been marked by a steadfast dedication to innovation and quality, leading the charge in traffic control technology. With 1000's of the country's traffic signs installed by Harding Traffic over 28 years, our impact is undeniable. Yet our ambition extends beyond electronic traffic signs; we've become a comprehensive provider of traffic management/warning systems, car park solutions, integrated traffic management solutions, data capture and analytics along with so much more. We are committed to enhancing urban infrastructure with our cutting-edge solutions

Quality Guaranteed

Harding Traffic holds AS/NZS 4801 Health and Safety Management certification, ISO 9001 manufacturing quality certification and ISO 14001 Environmental Management System certification. These certifications represent Harding's commitment to providing a consistently high level of service, delivery quality products based on sound management and process controls.
