About Us

At Harding Traffic, we are more than just a company; we are pioneers in traffic control solutions with a rich history dating back to 1966 when Harding Signals was incorporated. This marked our venture into electronic traffic signals.

In 1997, our area of operations moved away from Traffic Signals and into Electronic Signage and Traffic Management Systems. To reflect this, we changed our name to Harding Electronic Signals Ltd. Harding Traffic's integration into the Traffitech Group in 2007 marked a new era of growth, joining a group of companies boasting a robust financial standing with \$45 million in revenue, assets exceeding \$20 million, and a dedicated team of 180 staff and 6 locations across New Zealand.

Our journey has been marked by a steadfast dedication to innovation and quality, leading the charge in traffic control technology. With 1000's of the country's traffic signs installed by Harding Traffic over 27 years, our impact is undeniable. Yet our ambition extends beyond electronic traffic signs; we've become a comprehensive provider of traffic management/warning systems, car park solutions, integrated traffic management solutions, data capture and analytics along with so much more. We are committed to enhancing urban infrastructure with our cutting-edge solutions.

Today, Harding Traffic stands as a testament to over 50 years of expertise in the traffic industry. Our capabilities extend across the design, manufacture, and installation of high quality, specialised traffic systems. This includes everything from Motorway signs and School Zone signs to Rural Interchange Advance Warning Signs, Illuminated Road Stud technologies, car park systems, electronic warning systems and off-street signage. We take pride in serving a diverse clientele that includes NZTA, local Councils and authorities, commercial entities and contractors.

Quality Guaranteed

Harding Traffic holds AS/NZS 4801 Health and Safety Management certification, ISO 9001 manufacturing quality certification and ISO 14001 Environmental Management System certification. These certifications represent Harding's commitment to providing a consistently high level of service, delivery quality products based on sound management and process controls.

Powerful, Intelligent Sign Management Anywhere, Anytime

Smarter Sign Control at Your Fingertips

Managing traffic signage has never been easier or more efficient.

OverSite VMS by Harding Traffic is a comprehensive remote access solution designed specifically for real-time control and management of Variable Message Signs (VMS). Whether you're overseeing road safety messaging, event logistics, or dynamic traffic updates, OverSite VMS gives you total control, securely and reliably, from wherever you are.

Built with simplicity, flexibility, and performance in mind, this platform is ideal for councils, contractors, and network operators looking to modernise their signage infrastructure and reduce on-site interventions.

Key Features That Set SmartSign Apart

Remote Access from Anywhere

With OverSite VMS, there's no need to be on-site to update or manage your signs. By using a secure Remote Desktop Connection, authorised users can log in and take control of the signage network from any internet-connected Windows device. This reduces travel time, streamlines operations, and ensures you can respond instantly to changing road conditions or urgent public messages.

Create & Display Custom Messages in Real Time

Craft tailored messages directly through the platform with full flexibility over wording, text layout, and colour. Whether it's a single-page safety reminder or a two-page directional notice, you can create it on the fly and push it live in seconds. For frequently used messages, OverSite VMS also allows you to save them to a customisable message library for fast recall.

Smart Library Management

Every sign within your network can have its own curated message library, tailored to its specific location or use-case. Switch easily between signs, view their saved messages, and manage them without leaving your desk. This allows you to build a comprehensive, ready-to-deploy messaging system that supports both planned and unplanned scenarios.
